**Lectures for schools – Kindergarten to Tertiary  
Snake Safety – Gene pools & Biodiversity**

Nature can live without us but the reverse is impossible. In my lectures students will learn about the serious dangers of narrowing our gene pools. They learn about keystone species and how they, plus broadly based gene pools hold our natural world together. They will learn about the present unsustainable plunder of our oceans. I teach students to think for themselves and challenge even themselves. Paradoxically most politicians, not even Ministers for Agriculture or the Environment seem to understand about our gene pools & keystone species nor about the dire state of the world's oceans.

**GM FOOD – It concerns you!**

**For our kids' sake, look at the dangers of Genetically Manipulated Food (GM)**

**90% of Australians know nothing about the GM lie but in late 2008 the contamination starts.**

Oh but they intend to feed the world with GM! Oh do they really? Canola farmers of Canada - [www.nfu.ca](http://www.nfu.ca) will tell you how they were conned into growing GM canola. GM gives them **no** higher yields, their chemical costs are now **higher** and GM seeds cost them 3 to 5 times **more** than Non-GM seeds. Any honest scientist or agronomist will tell you "there are **not** yet any answers to drought with GM". Since the introduction of **unlabelled GM food** into Australia from the US (GM corn syrup, GM soy and GM canola oil) asthma and other allergies have been on the rise; just like in the US since GM, there has been a **spike** in allergies in children. Ventolin sales are up. Monsanto have already said that they want to control the food of the world with GM. Monsanto's **Agent Orange** has already destroyed the lives of millions. Learn how cotton farmers in India have been devastated with Monsanto's GM lie.

CSIRO research says: GM food is dangerous - read the first 3 paragraphs page 57 Genetic Roulette. The Public, Farmers and Journalists should read at least Pages 1 through 11. - Medical Doctors read at least Sections 1, 5, 6, 7 - Pregnant women, Section 8 is a must. - Ethical scientists read at least Sections 2 to 4. Genetically Manipulated Crops are not yet ready, they are still too dangerous especially for our children. The science is in to prove that GM is dangerous; who is really pushing GM and who says that GM is not an issue? Is it funding from Monsanto?

**All our politicians have the book GENETIC ROULETTE by Jeffrey Smith; but they won't open it.**

**Dr Rosanna Capolingua** - the President of the AMA? - Please Rosanna it could now be up to you.
