

## **GENETICALLY ENGINEERED CROPS means: GM, GMO or TRANSGENIC.**

**Patented DNA is in the pollen. When contaminated, Canadian & US farmers are liable to Monsanto.**

**More at [www.snakeshow.net](http://www.snakeshow.net) - Learn the other side of the whitewashed GM Debate.**

*Ask any High School student to verify this simple information.*

Genetically engineered (GM) crops are not about feeding a starving world. We have not been genetically engineering plants for thousands of years nor have we been crossing one species with another like plants and animals and making the offspring viable and fertile. The real contamination in Australia has just begun.

Canada is almost completely contaminated with GM pollen. Weeds are now resistant to Roundup and farmers must use stronger chemicals; sold by Monsanto. See: National Farmers Union of Canada 'Top ten' at [www.nfu.ca](http://www.nfu.ca)

When chemical companies own our crops because of the contamination by their patented DNA, they will design crops to grow only with their own chemicals. Chemical companies must sell chemicals, and drug addicted plants is the perfect way to do it. In the end, would a chemical company design plants that did not need their chemicals?

Learn about the **Terminator/Traitor** genes and the irreplaceable and threatened **Vavilov centre of Mesopotamia**. The Vavilov Centre for corn in Mexico has already been hit by GM pollen; they said it could never happen.

The control of our food by patented DNA is what this is all about. This issue could be more serious than a nuclear war because the patented DNA is carried in the pollen. When we are completely contaminated, no one will control anything, because it will be **out of control**. 'Canola test plots' are **not** test plots; they are here to contaminate our country. **GM Crops are the hideous new cane toads. Dr Sue Meek the Gene Technology Regulator and the Farmers' Federations** have lobbied hard to have Australia contaminated. Why contaminate Australia irreversibly with pollen that is legally owned by a chemical company? Why destroy the \$billion markets for clean non-GM produce that the world now wants? **Bayer owns the DNA** so while there is time who should pay for the cleanup?

**Why the rush to contaminate? Why the silence? Where is our media?**
