

Some Irresponsible Biotechnologists and Some Ignorant Politicians that Support them.

All [highlighted links](http://www.snakeshow.net) at: www.snakeshow.net

**Secret GM test plots have already been planted in Victoria
Contamination with patented pollen is what the chemical companies are trying to achieve**

Do we have a politician or biotechnologist in this country that has the guts to speak up?

Don't just parrot the lies that are peddled by the chemical companies and their cronies. This issue is far too serious for our children's future to be left to some mercenary biotechnologists and politicians that would not know the difference between a gene pool and a swimming pool.

The so-called Test Crops are an insidious lie. Testing has already been done in Canada with Roundup Ready Canola. In Canada, Roundup Ready Canola has become like the cane toad. As was predicted, **because of the laws of basic biology**, they have developed super weeds. Meaning that each year the Roundup is less effective in weed control. Monsanto have said not to worry because they have a new chemical for the weeds; just add it to the Roundup. Ask the [National Farmers Union of Canada](#) what they think about it because **this is an international scandal**. You can call the Director of Research at the NFU in Canada on: 0011-1 (306) 652-9465 ask to speak to: Darrin Qualman or Fax (306) 664-6226.

Someday this GE technology could be ready for the kitchen table or for animal fodder but in its present form it is not. The day could come when this technology is clean and safe and there are no more allergies to the new proteins. The time may come when our existing gene pools can be **guaranteed** protection and the new GM/GE plants are **not** chemical dependent and the pollen is **not** patented.

When our farmers' crops are contaminated with GM pollen, will the farmers **be compensated** by the likes of Monsanto, Bayer, DuPont or Syngenta etc? Must a farmer be taken to court by some chemical company that wants to have them charged for stealing **patented pollen** that they did not want in their crops in the first place? The world does **not** want GM food; but it **is** being forced upon us by thugs.

- 1. NON-GM produce can easily be sold in the US, if we go GM we can't sell it to them because the US is overproducing GM and it's hard to sell; but they are learning; see [The Future of Food](#)**
- 2. Nobody wants genetically engineered food nor the GM pollen to contaminate their own crops, so the US is campaigning to contaminate everybody else, so that nobody will have a choice.**
- 3. We can always sell non-genetically engineered produce (Non-GE/GM) anywhere in the world, so why contaminate Australia; once we are contaminated we are contaminated forever. Our pollen will be patented and the plants chemical dependent and then we must pay royalties to chemical companies forevermore. What a magnificent heritage to hand on to our children.**
- 4. Those that insist that we must hurry and go down this genetically engineered path of no return must either be ignorant or gullible or else they are being paid off by a chemical company**
- 5. Do we have an honest politician or biotechnologist in this country that has the guts to speak out? It appears that Mr. Murdoch and Mr. Packer either don't know or don't care; otherwise they themselves would be speaking up on an issue as important as this. We are talking about the protection of the genetic heritage for the future of the human race and that is irreplaceable.**

Sue Meek and Britt Maxwell the so-called Gene Technology Regulators are dangerous people. These chemical company cronies refuse to discuss the contamination of our [gene pools](#) or patented pollen or insurance for when farmers' crops are contaminated **and** they go silent when asked how they propose to keep our crops segregated from the GM pollen flow. Why employ highly irresponsible people that are not qualified for the job? Have you read [Seeds of Deception](#) or seen [The Future of Food](#)? Prime Minister, if you take advice from chemical companies and their mates, **don't plead ignorance!**

**GE/GM seeds will always be available to contaminate our country; so what is the rush?
Why the secrecy and who is accountable? Mr. Prime Minister are you not accountable?**
